Workshop to Introduce the Mechanistic-Empirical (M-E) Pavement Design Guide

Federal Highway Administration and State Highway Agencies

Agenda

The full-day schedule will be adjusted
to accommodate the work schedules
of the host agencies.

8:00-8:15 am	Workshop welcome	Local agency
8:15-9:15 am	Design Guide Introduction	DGIT *
9:15-10:15 am	What's Different in M-E Guide	DGIT *
10:15-10:30 am	BREAK	
10:30-11:30 am	HMA Aspects of the M-E Guide	DGIT *
11:30-1:00 pm	LUNCH	
1:00-2:00 pm	PCC Aspects of the M-E Guide	DGIT *
2:00-2:45 pm	Implementation of the M-E Guide	DGIT *
2:45-3:00 pm	BREAK	
3:00-3:45 pm	State Implementation Activities	Local agency
3:45-4:30 pm	Open Discussion	All
4:30-5:00pm	Wrap-up and Adjourn	DGIT *

* FHWA's design guide implementation team (DGIT) will make these presentations. Typically, three members of the DGIT will participate as instructors in each workshop. The names of all DGIT instructors are listed on the following page.

Workshop to introduce the the National Highway Design Guide

Workshop objectives: Address the
 and design issues, and discuss

Agenda

The agenda is divided into two sessions.
 The first session will be held
 at the headquarters.

8:00-8:15 am	Workshop Welcome	Local Agency
8:15-8:30 am	Opening Remarks by the Director	Local Agency
8:30-10:15 am	Workshop Session 1: The Guide	Local Agency
10:15-10:30 am	Break	
10:30-11:15 am	Workshop Session 2: The Guide	Local Agency
11:30-12:00 pm	Lunch	
1:00-2:00 pm	Workshop Session 3: The Guide	Local Agency
2:00-2:15 pm	Registration of the NHDG	Local Agency
2:15-2:30 pm	Break	
2:30-3:00 pm	Workshop Session 4: The Guide	Local Agency
3:00-3:15 pm	Break	
3:15-3:30 pm	Workshop Session 5: The Guide	Local Agency
3:30-3:45 pm	Break	
3:45-4:00 pm	Workshop Session 6: The Guide	Local Agency

The workshop will be held at the NHDG office, 1000
 California Street, San Francisco, CA 94109. The workshop
 is open to all interested parties. The workshop is free of charge.

**DGIT Instructors for

Mechanistic-Empirical Design Guide

New and Rehabilitated Pavement Structures

Introduction

U.S. Department of Transportation
Federal Highway Administration

M-E Pavement
Design Guide

Objectives of the Workshop

- Introduce the M-E Design Guide
- Discuss status
- Describe key elements
- Highlight capabilities
- Provide an opportunity to discuss evaluation and implementation

M-E Pavement
Design Guide

Introduction Outline

- Current pavement design procedures
- Need for change
- Capabilities of M-E design systems
- NCHRP 1-37A project –Background & Highlights
- FHWA's role in the implementation process

M-E Pavement
Design Guide

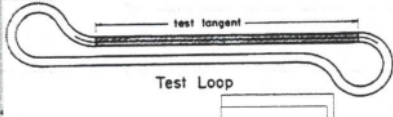

Design Methodologies

- Experience
- Empirical
 - Statistical models from road tests
- Mechanistic-empirical
 - Calculation of pavement responses, i.e., stresses, strains, deformations
 - Empirical pavement performance models
- Mechanistic

AASHO Road Test

AASHO Road Test Achievements

- Serviceability concept - PSI
- Traffic damage factors – ESALs
- Structural number concept – S_n
- Empirical Process
- Simplified Pavement Design

What's Being Used in 2003

Design Procedures	DOTs
1972 AASHTO Guide	3
1986 AASHTO Guide	2
1993 AASHTO Guide	26
Agency's own pavement design guide or combination of AASHTO/Agency design procedures	17

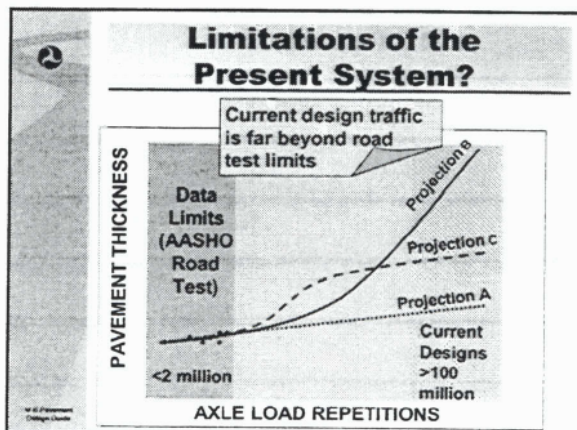

M.E. Pavement Design Guide

Limitations of the AASHO Road Test Based Procedures

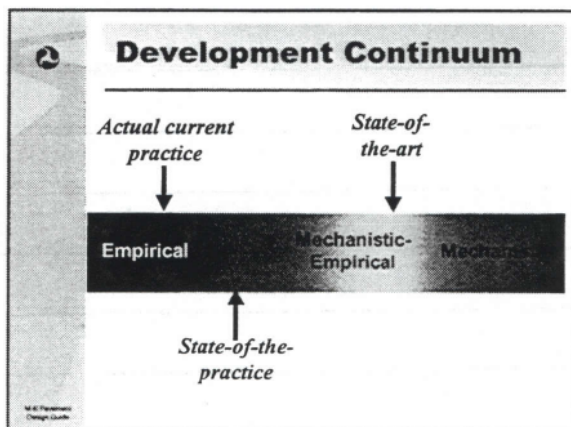

- One climate – Ottawa, Illinois
- Limited Span – two years
- Limited Traffic – generally < 2 million
- 1950s vehicles
- 1950s materials and construction
- Only new construction

M.E. Pavement Design Guide

- ### Structural Number
- Flexible Pavements
 - Not fundamental properties
 - Cannot be measured in laboratory
 - Cannot be established for new materials
 - Rigid Pavements
 - "K" value
 - Bumping to account for stabilized layers
 - No fundamental load carrying capacity
- M & E Pavement Design Guide

NCHRP 1-37A Project

A coordinated and cooperative effort to improve the state of the practice for pavement design by developing a system that incorporates advances in pavement design.

Empirical Procedures

to

Mechanistic-Empirical Procedures

Mechanistic - Empirical Principles

M-E Principles = Engineering Fundamentals

M-E Pavement Design Process

Terminology

- M-E Design Guide
 - NCHRP 1-37A Guide
 - 2002 Design Guide
 - New Design Guide
 - Guide for M-E Design
- ALL THE SAME THING!**
Not AASHTO Design Guide.

M-E Performance
Design Guide

How will I benefit from the M-E Design Guide?

It Ties Together:

- Structural Design
- Materials Selection
- Construction

Making sure that
the design criteria
have been met or
exceeded.

Agency/Owner

and

Contractor/Supplier

M-E Performance
Design Guide

M-E Guide Capabilities

- **Integrated effects -**
 - Each current and future loading
 - Site specific climate (ICM)
 - Material changes over time

M-E Performance
Design Guide

M-E Guide Capabilities

- Predicts specific distresses based upon analysis on fundamental materials properties and M-E principles
- Tool for forensic analysis

M-E Pavement Design Guide

M-E Guide Capabilities

- Allows design of -
 - New pavements
 - Composite pavements
 - Rehabilitation / overlays
- Evaluate effects of specification changes

M-E Pavement Design Guide

M-E Design Guide Basics

M-E Pavement Design Guide

M-E Design Guide - Basics

- Proven theories
- M-E based
- Modular design
- One software / common interfaces
- Hierarchical inputs
- HMA – elastic layer basis
- PCC – finite element basis
- National (LTPP) & local calibration
- All documentation accessible

M-E Pavement
Design Guide

Why are so Many Details Needed?

- Materials properties change with time and environment
- Calculates incremental damage for each load
- Damaged dependent upon stress strain and material properties at time of loading

M-E Pavement
Design Guide

Pavement Design Variables

M-E Pavement
Design Guide

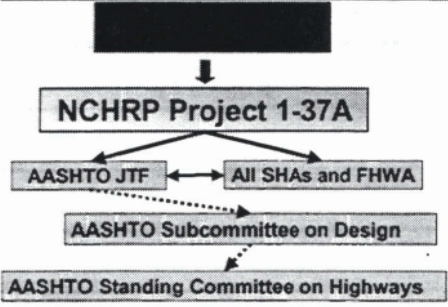

Why is Incremental Damage Important?

- Allows for incremental performance predictions during performance period
- Adjustments of scheduled rehab(s) based on as-constructed and actual performance data
- Basis for performance measures for long term warranties 5, 10, 15 years

AASHTO Guide - Current and Future Developments

```

graph TD
    A[ ] --> B[NCHRP Project 1-37A]
    B --> C[AASHTO JTF]
    B --> D[All SHAs and FHWA]
    C --> E[AASHTO Subcommittee on Design]
    E --> F[AASHTO Standing Committee on Highways]
  
```

M-E Design Guide Timeline

- NCHRP project deliverables
 - Hard copy
 - CD version
 - Web-based version
- Concerns to be addressed
- Enhancements to be made

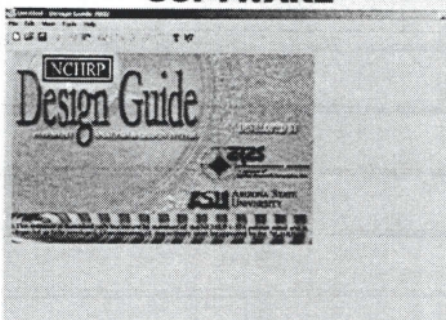

Enhancements Underway

- Design Models -
 - Top Down cracking-NCHRP 1-42
 - Reflective cracking-NCHRP 1-41
- Traffic Interface-NCHRP 1-39
- Implementation-NCHRP 1-40
- Data collection for calibration of HMA models – NCHRP 9-30A

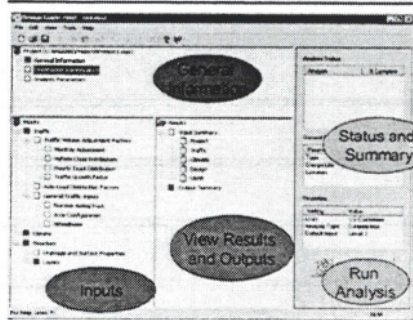

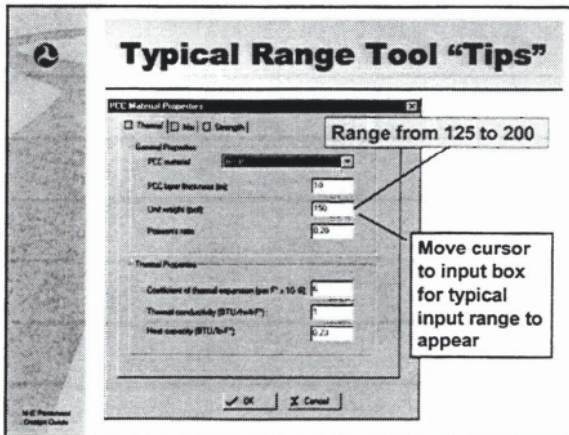

M-E DESIGN GUIDE SOFTWARE

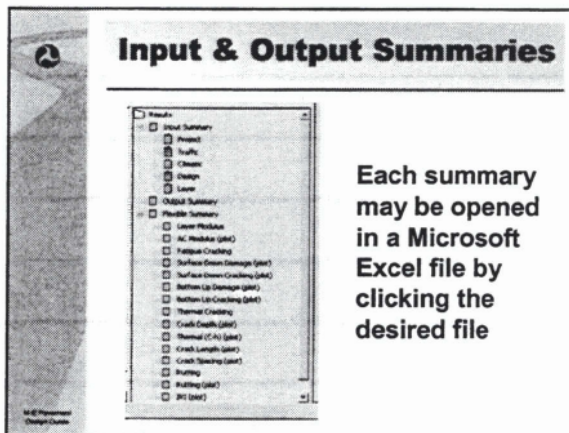

Convenient Input Layout

FHWA's Role in Design Guide Implementation

How does this program fit into
the FHWA's national program?

M-28 Pavement
Design Guide

FHWA Pavement Program Vision

*"Pavements that meet our
customers' needs and are safe,
cost-effective, long-lasting and
can be effectively maintained"*

M-28 Pavement
Design Guide

FHWA Pavement Program

- Encompasses all pavement elements
- Integrated throughout FHWA
- Multi-faceted activities
- Supports AASHTO initiatives
- Created a Design Guide Implementation Team (DGIT)

M-28 Pavement
Design Guide

DGIT PURPOSE

To assist State highway agencies and industry in development and implementation of the M-E Pavement Design Guide

M-E Pavement Design Guide

Elements of the DGIT Plan

- Workshops
- Training
- Technical Assistance
- Refinements

M-E Pavement Design Guide

The New and the Different

Guide for Mechanistic - Empirical (M-E) Design of New and Rehabilitated Pavement Structures

U.S. Department of Transportation
Federal Highway Administration

M-E Pavement
Design Guide

The New and the Different

- Session outline
 - Capabilities
 - Compare AASHTO & M-E Guides
 - Inputs
 - Climate Traffic
 - ACP PCCP
 - Unbound materials
 - Reliability
 - Calibration and Testing

M-E Pavement
Design Guide

Capabilities

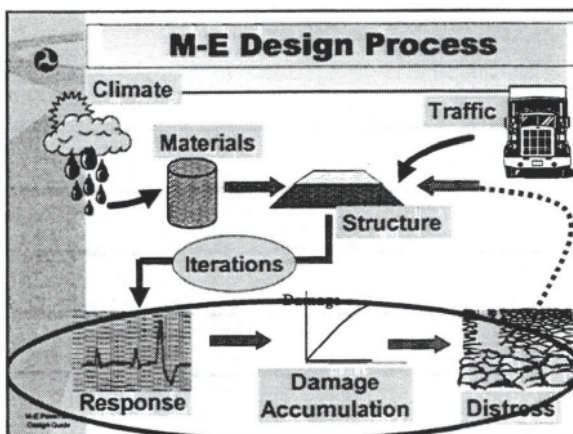

- Wide range of pavement structures
 - New
 - Rehabilitated
- Explicit treatment of major factors
 - Traffic – Over-weight trucks
 - Climate – Site specific and over time
 - Materials – New and different
 - Support – Foundation and existing pavement

M-E Pavement
Design Guide

Capabilities

- Models to predict change in distress over time
- User establishes acceptance criteria
 - Distresses and smoothness

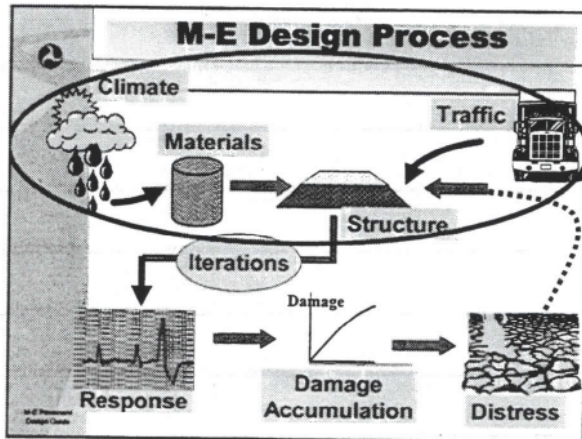

The New and Different

	1993 Guide	M-E Guide
O u t p u t s	Structural Number and / or Rigid Pavement Thickness	Time Series Distress and Smoothness Prediction

The New and Different

	<u>1993 Guide</u>	<u>M-E Guide</u>
I n p u t L e v e l s	Single Value	Hierarchical Levels
		Level Three
		Level Two
		Level One

Hierarchical Levels

Level Three ..	Defaults
Level Two	Correlations (Routine significant projects)
Level One	Project specific data (Research, forensics and high level important projects)

Hierarchical Levels

Level	Source	Usage
Three	Defaults in M-E software	Routine projects
Two	Local correlations	More significant projects
One	Project-specific data	Research, forensics and high-level projects

All of the information
 Design Counts

Design Inputs - Hierarchical Levels

Input levels can be mixed and matched

Damage calculations are exactly the same regardless of design input level

All of the information
 Design Counts

Thermal Properties
Wind Speed
Air Temperature
Water Table Depth
Sun Radiation
Precipitation

Climatic

Climatic Inputs

Input	1	2	3
Level	√	√	√

- Identify weather station
 - Pick from 800 sites
 - Create virtual by averaging surrounding sites
- Create EICM file
- Depth to water table

Climatic

Processing EICM Inputs - Flexible Design

Adjustments -

- Unbound materials
 - Resilient modulus
 - Moisture content
- HMA Hourly temperature profile
 - Thermal cracking
 - Rutting

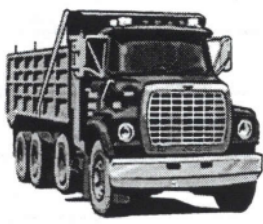

- ### Processing Climatic Inputs - Rigid Design
- EICM used to predict
 - Hourly temperature profile
 - Monthly moisture gradient

TRAFFIC INPUTS

M-E Pavement Design Guide

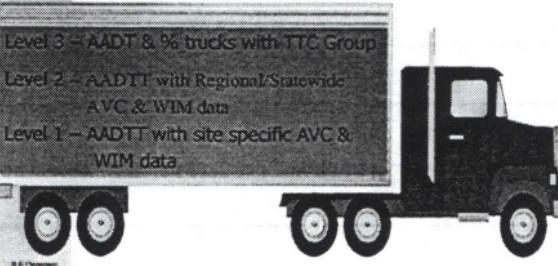

The New and Different

	<u>1993 Guide</u>	<u>M-E Guide</u>
T r a f f i c	ESALs	Axle Load Spectra
	Truck Equivalency Factors	Truck Speed Gear/Axle Configuration Axle/Tire Spacing Tire Pressure Traffic Wander Monthly, Daily Distribution Factors

M-E Pavement Design Guide

Traffic Hierarchical Input Levels

Level 3 – AADT & % trucks with TTC Group

Level 2 – AADTT with Regional/Statewide AVC & WIM data

Level 1 – AADTT with site specific AVC & WIM data

M-E Pavement Design Guide

Traffic Module Inputs - Overview

Input Parameters	Input Level		
	1	2	3
AADTT for Base Year	√	√	
AADT and Percent Trucks for Base Year			√
Directional Distribution Factor	√	√	√
Lane Distribution Factor	√	√	√
Truck Distribution Factors - Base Year	√	√	
Axle Load Distribution Factors	√	√	
Monthly Distribution Factors	√	√	√

MSD Performance
Design Studio

Traffic Module Inputs - Overview

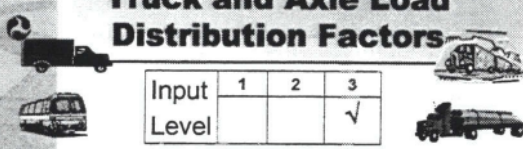

Input Parameters	Input Level		
	1	2	3
Hourly Distribution Factors	√	√	√
Truck Traffic Growth Function/Factor	√	√	√
Axle Load Distribution Factors	√	√	
Truck Traffic Classification (TTC) Factor			√
No. of Axle Types per Truck Class	√	√	
Axle Spacing	√	√	
Axle Load Groups	√	√	√
Tire Spacing/Axle Configuration	√	√	√
Tire Pressure	√	√	√

Traffic Module Output Files (Load Spectra)

Year	Month	Hour	Axle Type	Load Group				
				0-2	2-4	4-6	..	x-y
i	j	k	Single					
			Tandem					
			Tridem					
			Quad					

MSD Performance
Design Studio

Truck and Axle Load Distribution Factors

Input	1	2	3
Level			✓

- Use Truck Traffic Classification (TTC):
 - Defaults derived from LTPP Data
 - Select one of the 17 Groups
 - TTC Selection is based on functional classification and overall distribution of the major truck classes (buses, single unit trucks, single-trailer trucks, and multi-trailer trucks)

M.E. Pavement Design Guide

Axle Configuration Parameters

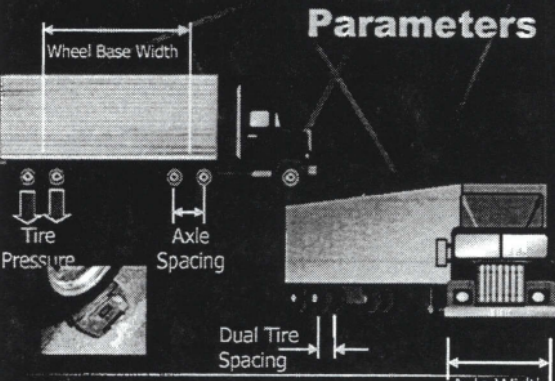

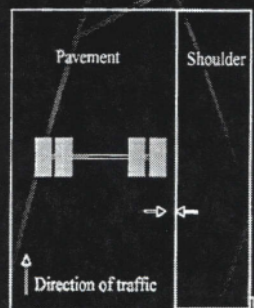

Diagram illustrating various axle configuration parameters for a truck:

- Wheel Base Width
- Tire Pressure
- Axle Spacing
- Dual Tire Spacing
- Axle Width

Traffic Wander

Used to calculate pavement responses & the number of axle load applications over a point for predicting distress & performance.

- Mean wheel location = 18 in.
- Standard deviation = 10 in.
- Design lane width.

NCHRP 1-39

Traffic Data Collection, Analysis & Forecasting for M-E Design

- Developed Software - TrafLoad
- Beta version under review
 - Reads C-card and W-card data
 - Manipulates data into M-E Guide format
 - Intended to supply traffic needs of M-E Guide

M-E Research
Design Guide

The New and Different

F o u n d a t i o n	<u>1993 Guide</u>	<u>M-E Guide</u>
	Resilient Modulus	Universal non-linear Resilient modulus Model

M-E Parameters Design Guide

Performance Evaluation

Procedure evaluates the trial design to determine if it meets the desired performance criteria at individually set reliability levels

M&D Performance Design Center

New Approach to Design Reliability

- Different than AASHTO 1986/93
- Based on predicted distresses and IRI
- User selects reliability levels and performance criteria for distresses and IRI

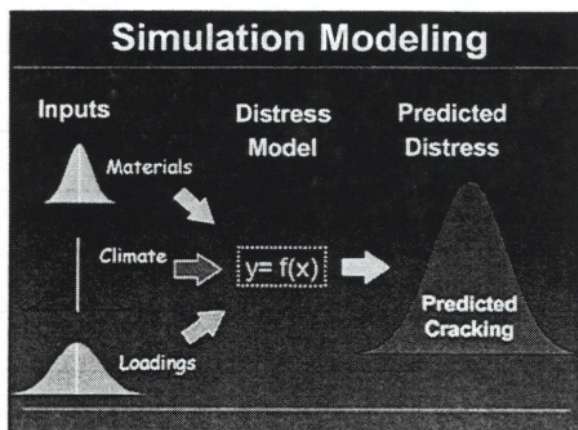

M&D Performance Design Center

Reliability

- ☐ As proposed
 - Probabilistic approach
 - Monte Carlo simulation
- ☐ As Delivered
 - Variability of predicted vs observed
 - Calibrated to national LTPP data (Level 3)

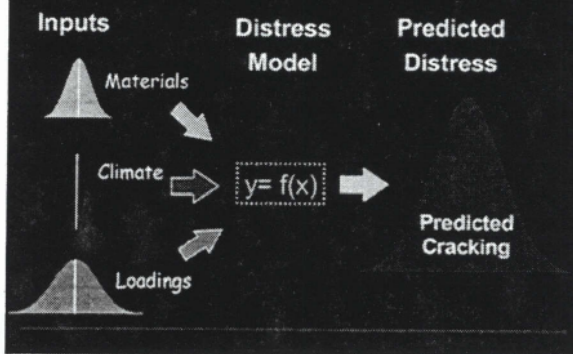

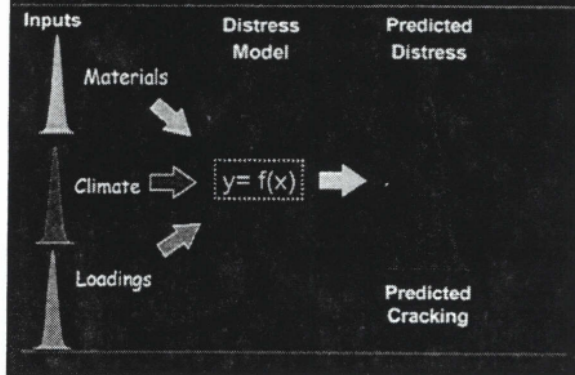

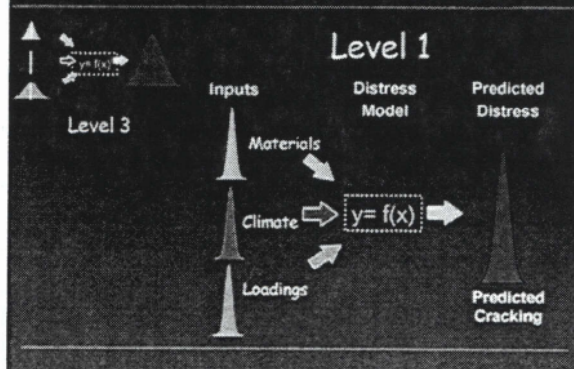

Simulation Modeling - Level 3

Simulation Modeling - Level 1

Simulation Modeling

Reliability

- ☐ As proposed
 - Probabilistic approach
 - Monte Carlo simulation
- ☐ As Delivered
 - Variability of predicted vs observed
 - Calibrated to national LTPP data inputs (Level 3)
 - Based on national calibration/LTPP

Variability

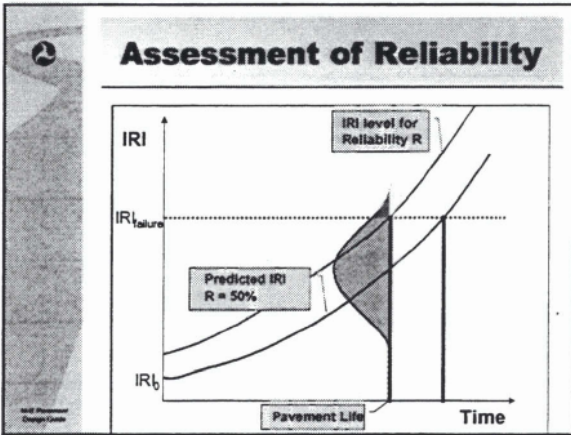

Variability

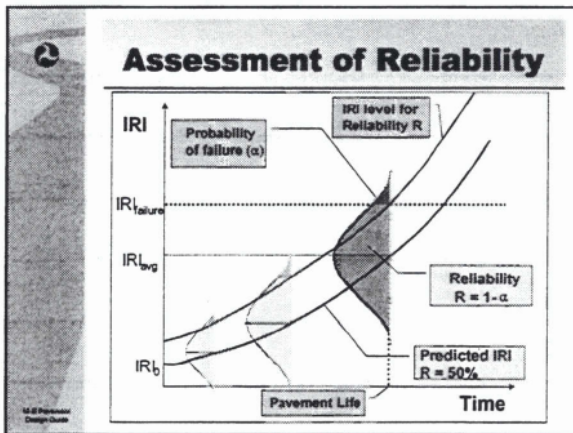

M-E Guide Calibration

- Done with national LTPP data
- Default values also from LTPP
- Confirm/change national defaults
- NCHRP 1-40 guidelines for local calibration (future FHWA workshops)

M-E Performance
Design Guide

Implementation - Calibration

- Requires extensive experimental studies, including:
 - Field testing programs
 - Laboratory testing
 - Data analysis

M. D. Petersen
Design Group

Field Testing Programs

- Select agency test sites (LTPP and others) that includes entire range of -
 - Climate types and areas in the agency
 - Traffic characteristics
 - Pavement types -
 - HMA (all types) and PCC (all types)
 - Types of overlays and rehabilitation alternatives
 - Base and subgrade types
 - Joint types in PCC

M. D. Petersen
Design Group

Field Testing Programs

continued

- Obtain pavement performance data
 - Distress surveys
 - FWD and core testing
 - Pavement profile
 - Material related distresses
- Determine in-place material properties

M. D. Petersen
Design Group

Laboratory Testing

- Extract cores
- Determine properties of in-situ material
- Calibration test are the same as those performed for new designs

14-2 Pavement Design Guide

NCHRP 9-30

“Experimental Plan for Calibration and Validation of HMA Performance Models for Mix & Structural Design”

- Set up a national database for HMA calibration
- Initially populated with NCHRP 9-19 and LTPP data
- NCHRP 9-30A to populate database for missing material types

14-2 Pavement Design Guide

Data Analysis

Local calibration will involve recalibrating distress models using data collected from the selected local sections

14-2 Pavement Design Guide

- Summary**
- Covered M-E guide capabilities, inputs, reliability, and calibration
 - Compared AASHTO & M-E guides
 - Described local calibration process
 - Detailed the inputs needed for flexible and rigid designs
- M-E Placement Design Guide

Flexible Pavement Design

The Mechanistic-Empirical Way

U.S. Department of Transportation
Federal Highway Administration

M-E Pavement Design Guide

Presentation Outline

- What's new in flexible pavement design using the M-E guide?
 - Differences
 - Capabilities
- Tests and equipment

M-E Pavement Design Guide

What's New in Flexible Pavement Design?

- Analysis model – layered elastic
- Distress is based on material performance
 - Fatigue - top down and bottom up
 - Rutting
 - Thermal cracking

M-E Pavement Design Guide

Capabilities

- Provides link between
 - Asphalt mixture design
 - Performance prediction
 - Structural design
- HMA overlays over -
 - flexible pavements
 - fractured rigid pavements
 - rigid pavements

© 1999 Pearson Education, Inc.

Capabilities

- Integrated with Superpave system
- Models calibrated using LTPP data
- “Plug and Play” prediction models
- Includes method for local calibration

© 1999 Pearson Education, Inc.

Example Simulation

- New flexible pavement
- Conventional design (HMA over aggregate base)

© 1999 Pearson Education, Inc.

HMA Binder Characterization

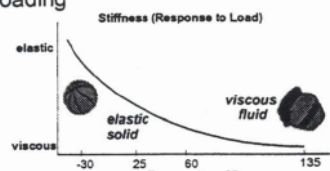

- Penetration
 - ASTM D5 and AASHTO T49
- Viscosity at 60°C
 - ASTM D2171 and AASHTO T202
- Viscosity at 135°C
 - ASTM D2170 and AASHTO T201
- Brookfield Viscosity
 - AASHTO TP 48
- Softening Point
- Shear Modulus
 - AASHTO TP 5

M.E. Peterson
Design Center

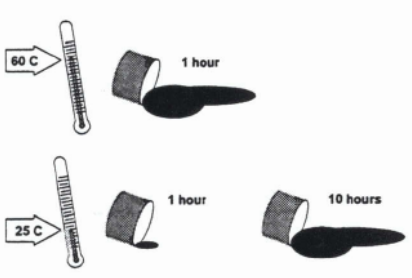

Consistency Behavior

- Indicator of Viscous and Elastic Characteristics of the Material
- Factors Affecting HMA Behavior
 - Temperature
 - Rate of loading
 - Aging

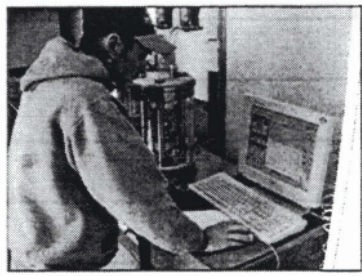

Temperature-Rate of Loading Relationship

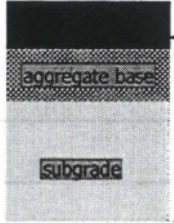

Mixture Characterization

HMA Materials Characterization

- Modulus of Elasticity

Asphalt Mixtures -
Dynamic Modulus
AASHTO TP62

Unbound Materials -
Resilient Modulus
NCHRP 1-28A
AASHTO T307

M-27 Measurement
Design Guide

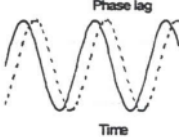

HMA Mixture - Dynamic (Complex) Modulus

$$|E^*| = \frac{\sigma_o}{\epsilon_o}$$

Adjusted for temperature and rate of loading.

$|E^*|$ = Dynamic modulus
 σ_o = Maximum (peak) dynamic stress
 ϵ_o = Peak recoverable axial strain

Phase lag

Summary

- What's new in flexible pavement design using the M-E guide?
- Example of M-E design
 - Differences
 - Capabilities
- Tests and equipment

Rigid Pavement Design

The Mechanistic-Empirical Way

U.S. Department of Transportation
Federal Highway Administration

M-E Pavement Design Guide

Objectives

- Demonstrate capabilities of the M-E Design Guide procedure for PCC pavements
- Show impact of individual design features on development of distresses

M-E Pavement Design Guide

Session Outline

- Overview of rigid pavements
- Sensitivity analysis using the M-E Design Guide

M-E Pavement Design Guide

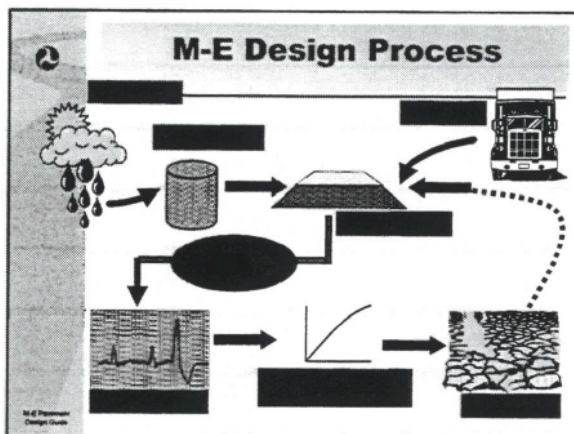

LONG-LIFE INFRASTRUCTURE

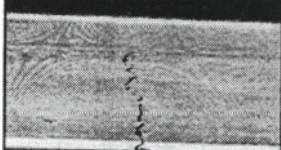

- 50-YEAR DESIGN LIFE CONCRETE PAVEMENT
- 100-YEAR DESIGN LIFE CONCRETE BRIDGES

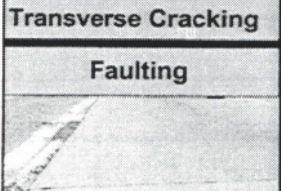

M&E Transportation Design Group

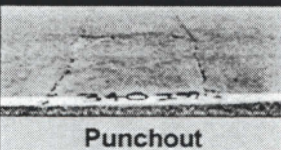

Rigid Pavement Performance

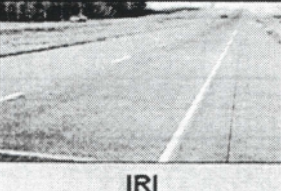

Transverse Cracking

Faulting

Punchout

IRI

Materials Characterization PCC Pavement Layers

- Strength & Elastic Modulus (over time)
- Coefficient of Thermal Expansion
- Drying Shrinkage (over time)
- Base Erosion Index

M&E Pavement Design Guide

Required Concrete Parameters

- Modulus of Elasticity
- Poisson's ratio
- Modulus of rupture
- Shrinkage
- Compressive strength
- Split tensile strength
- Coefficient of thermal expansion

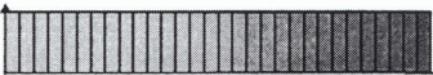

M&E Pavement Design Guide

Incremental Damage Concept – Accumulation for PCC Pavements

- Design life divided into monthly increments
- Specific material properties, traffic and climatic data used for each increment

Damage Increments over Time

M&E Pavement Design Guide

Sensitivity Analysis Using the M-E Design Guide

1. Reference design –
Analysis of reference JPCP and revised features
2. Rehabilitation design –
Analysis of unbonded JPCP overlay and revised features
3. CRCP design – Analysis of new design and revised features

M-E Pavement Design Guide

The approach we're using

- Define the reference design
- Select design features to revise
- Compare performance based on resulting distresses

M-E Pavement Design Guide

Reference JPCP Design

- Existing JPCP Pavement
 - I-78 Pennsylvania
 - Use the real data from LTPP Section 42-3044 (Input levels 2 & 3)
- Sensitivity analysis
 - Evaluate design feature impacts by changing the following selected design features one at a time –

Joint Spacing	Edge Support
Slab Thickness	Base Type
PCC Properties	Geographic Location

M-E Pavement Design Guide

Reference JPCP Design & Revised Features

Design Features		Reference Design	Revised Features
Location	Weather data	Harrisburg, PA	• Seattle, WA • Phoenix, AZ
	2-way AADTT	5,750 (heavy)	3,000 (medium)
Traffic	Vehicle class dist.	Default (TTC=1) Multi-trailer < 2%	Default (TTC=5) Multi-trailer > 10%
	Axle load dist.	Site specific data from LTPP DataPave	Default
Joint	Joint Spacing	20 feet	17 and 15 feet
	Dowel Bar	Yes 1-in. dia., 12 in. on center	No
Edge Support	Shoulder Type	Tied PCC	• HMA Shoulder • Standard (W=12ft.) • Wide lane (W=14ft.)

Reference JPCP Design & Revised Features

Design Features		Reference Design	Revised Features
PCC Properties	28-day Modulus of Rupture	600 psi	500 and 700 psi
	Coarse Aggregate (CTE of PCC)	Limestone (5.0×10^{-6} in./in./F)	Siliceous Gravel (7.0×10^{-6} in./in./F)
	Poisson's Ratio	0.15	0.20
Layer	PCC Slab	12 inches	10 and 14 inches
	Base	10-in. Granular (A1a) (Ebase = 50,000 psi)	10-in. CTB (Ebase = 1,000,000 psi)
	Subgrade	Fine grained soil (Esub = 5,000 psi)	No change

JPCP Analysis

- Sensitivity of pavement performance to revised features
- Express sensitivity as distress ratio
- Distress ratio – M-E analysis results for the revised design divided by results for the reference design:
 - » Slab Cracking
 - » Joint Faulting
 - » Smoothness

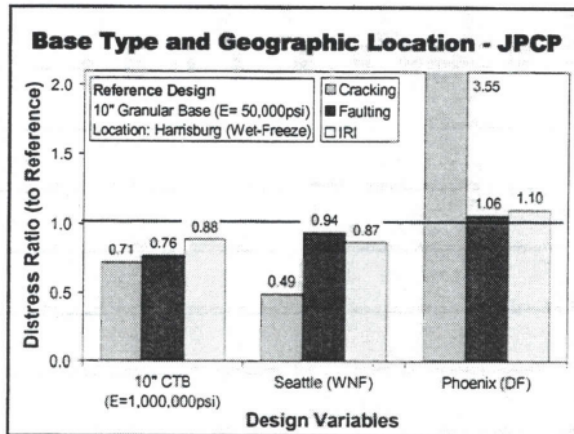

JPCP OVERLAY EXAMPLE

Unbonded JPCP Overlay for Rehabilitation of the JPCP Reference Design

M. E. Peterson
Design Guide

Design Inputs – JPCP Overlay on JPCP

- Existing Pavement (Reference Design) –
 - I-78 Pennsylvania – JPCP Pavement
 - LTPP Sect. 42-3044 (Input levels 2 & 3)
- Rehabilitated Pavement Structure –

▪ JPCP Overlay	10 inches
▪ HMA Separator Layer	2 inches
▪ Existing JPCP	12 inches
▪ Granular Base	10 inches
▪ Subgrade	–

M. E. Peterson
Design Guide

Unbonded JPCP Overlay - Design Inputs

- Concrete materials & mixture properties –
 - Flexural Strength, 600 psi at 28 days
 - Coeff. of thermal expansion, 5.0×10^{-6} in./in./F
- Other design features –
 - Dowels, 1-inch diameter, 12-inch spacing
 - Joint spacing, 20 feet
 - Tied PCC shoulder
 - Ebase, 50,000 psi
 - Esubbase, 5,000 psi
 - No repair of underlying reference JPCP

M. E. Peterson
Design Guide

Unbonded JPCP Overlay						
Design Parameter	Distress Type					
	% Slabs Cracked		Faulting, inches		IRI, in./mi.	
	Reliability		Reliability		Reliability	
	50%	90%	50%	90%	50%	90%
Failure Criteria	15	15	.125	.125	172	172
Reference Design	2.5	9.6	0.15	0.24	137	187
Joint Spacing 20 → 17	0.1	6.1	0.12	0.20	129	181
Joint Spacing 20 → 10	0.0	6.0	0.05	0.11	117	172
Thickness 10 → 12	1.0	7.4	0.12	0.20	122	172
Dowel bar diameter increased 1.0 → 1.5 in.	2.5	9.6	0.03	0.08	90	130

M-E Pavement Design Guide

CRCP Design Examples

CRCP - Design Approach

- Define reference design
- Evaluate the impacts of modified –
 - Steel reinforcement bar diameter
 - Steel placement depth
 - Concrete slab thickness
- Select a modified design
- Compare performance of modified design in three geographic locations

CRCP - Design Inputs

Use the same design inputs as used in the preceding JPCP reference design for –

- Material Properties
- Traffic Characteristics
- Subsurface Layers
- Tied PCC Shoulder

M&E Planning
Chicago, Illinois

Summary - CRCP Design Examples

Location	Slab Depth, inches	Steel Ratio, %	Rebar Diameter, inches	Rebar Depth, inches	Analysis results at the end of 30-year design life			Years to reach the performance limits	
					Avg. Crack Spacing (in)	Punch out (per mile)	IRI (in/mile)	Punch out (Limit=10)	IRI (Limit=172)
Pittsburgh	12	0.7	0.5	4	41.6	8.3	109.4	*	*
Pittsburgh	12	0.7	0.625	4	57.6	28.4	149.8	26.5	*
Pittsburgh	12	0.7	0.625	6	66.3	46.2	186.6	24.6	29.3
Pittsburgh	12	0.7	0.5	6	48.5	8.3	109.4	*	*
Pittsburgh	10	0.7	0.5	4	41.3	51.1	196.7	14.3	29.4
Houston	10	0.7	0.5	4	47	14.2	103.8	12.8	*
Seattle	10	0.7	0.5	4	50.8	13.3	102.6	14.5	*

CRCP – Climatic Effect

Summary

- Demonstrated some capabilities of the M-E design guide
- Showed impact of design features on distresses developed in –
 - JPCP – Reference and revised-feature designs
 - Unbonded JPCP overlay – New and revised-feature designs for rehabilitation of reference JPCP
 - CRCP – New and revised-feature designs with input similar to JPCP

1. The first part of the report deals with the general situation of the country and the position of the various groups of the population. It is a very interesting and informative study of the social and economic conditions of the country.

2. The second part of the report deals with the political situation of the country. It is a very interesting and informative study of the political conditions of the country.

3. The third part of the report deals with the cultural situation of the country. It is a very interesting and informative study of the cultural conditions of the country.

4. The fourth part of the report deals with the economic situation of the country. It is a very interesting and informative study of the economic conditions of the country.

5. The fifth part of the report deals with the social situation of the country. It is a very interesting and informative study of the social conditions of the country.

6. The sixth part of the report deals with the legal situation of the country. It is a very interesting and informative study of the legal conditions of the country.

7. The seventh part of the report deals with the educational situation of the country. It is a very interesting and informative study of the educational conditions of the country.

8. The eighth part of the report deals with the health situation of the country. It is a very interesting and informative study of the health conditions of the country.

9. The ninth part of the report deals with the environment situation of the country. It is a very interesting and informative study of the environmental conditions of the country.

10. The tenth part of the report deals with the future of the country. It is a very interesting and informative study of the future of the country.

11. The eleventh part of the report deals with the conclusion of the study. It is a very interesting and informative study of the conclusion of the study.

12. The twelfth part of the report deals with the appendix. It is a very interesting and informative study of the appendix.

13. The thirteenth part of the report deals with the bibliography. It is a very interesting and informative study of the bibliography.

14. The fourteenth part of the report deals with the index. It is a very interesting and informative study of the index.

15. The fifteenth part of the report deals with the list of figures. It is a very interesting and informative study of the list of figures.

16. The sixteenth part of the report deals with the list of tables. It is a very interesting and informative study of the list of tables.

17. The seventeenth part of the report deals with the list of maps. It is a very interesting and informative study of the list of maps.

18. The eighteenth part of the report deals with the list of photographs. It is a very interesting and informative study of the list of photographs.

19. The nineteenth part of the report deals with the list of illustrations. It is a very interesting and informative study of the list of illustrations.

20. The twentieth part of the report deals with the list of references. It is a very interesting and informative study of the list of references.

Implementation

Mechanistic-Empirical Pavement Design Guide

U.S. Department of Transportation
Federal Highway Administration

What are the key benefits of the M-E Design Guide?

- Improved confidence in design
- Increased pavement life
- More cost-effective designs
- Special analysis capabilities
 - Extrapolation for unusual designs
 - Complicated rehab designs
 - Identify problems with existing designs
 - Forensic analyses
 - Special loadings

How will I benefit from the Design Guide?

It Ties Together:

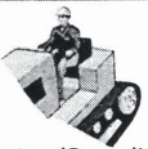

- Structural Design
- Materials Selection
- Construction

Making sure that
the design criteria
have been met or
exceeded.

Agency/Owner

and

Contractor/Supplier

M-E Design Guide - Significant Challenges

- The process represents a radical change in the way pavements are analyzed and designed
- Implementation will require a significant commitment of resources to be successful
- Time required 3-5 years (minimum)
- The design guide is not a cookbook

M-E Pavement Design Guide

Implementation Challenges

- Requires leadership & coordination
- Individual champions needed
- Lead States are needed
- Specialization in the pavement engineering discipline
- Technical assistance mechanism needed (DGIT is a start)

M-E Pavement Design Guide

M-E Guide Implementation Requirements

- Compare new and existing design systems
- Evaluate sensitivity to local factors and conditions
- Move from national to local calibration
- Develop short & long-term action plans

M-E Pavement Design Guide

Implementation - A five-step process

System Knowledge

↓

Action Plan

↓

Verification

↓

Calibration

↓

Validation

M-E Personnel
Design Units

Step 1 - System Knowledge

- Release of final product
- Understanding concepts and procedures
- Experience using product

M-E Personnel
Design Units

Is the M-E Guide Ready to Implement?

- Panel concerns
- JTF concerns
- Expectation - AASHTO standard
- Time required to change
- Future enhancement activities
- Best available national system!

M-E Personnel
Design Units

Step 2 - Action Plan

- Questions for action plan
 - What needs to change?
 - Can local data information be used/converted?
 - What is most critical?
 - How much it will cost?

Mid-Process
Change Guide

Experimental Concepts Definitions

Step 3 - Verification: Assuring general reasonableness of results

Step 4 - Calibration: Minimizing the difference between predicted and observed distresses

Step 5 - Validation: Confirming the accuracy of results after calibration

Mid-Process
Change Guide

Step 3 - Verification

- Questions needing answers
 - Does it make sense?
 - Predict logical results?
 - Does it fit local conditions?
 - Represent improvement?
 - Potential for adjustment?

Mid-Process
Change Guide

Step 4 - Calibration

- Questions needing answers
 - Is there a significant difference between local data and national defaults?
 - What data is needed?
 - How long performance period?
 - How many sites needed?

M-E Performance Design Guide

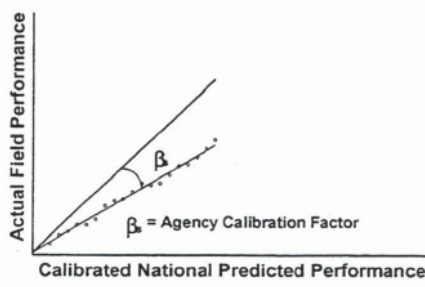

M-E Guide Calibration

- ✓ Done with national LTPP data
- ✓ Default values also from LTPP
- ✓ Confirm or change national defaults

M-E Performance Design Guide

Regional / Local Calibration Process

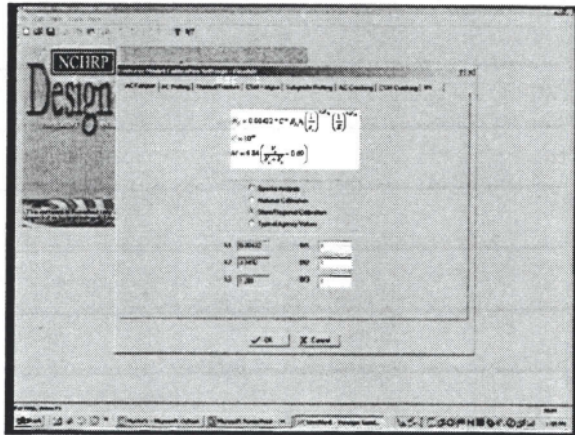

β = Agency Calibration Factor

Actual Field Performance

Calibrated National Predicted Performance

M-E Performance Design Guide

Calibration

- Requires extensive experimental studies, including:
 - Field testing programs
 - Laboratory testing
 - Data analysis

Pool resources to maximize effort and efficiency!

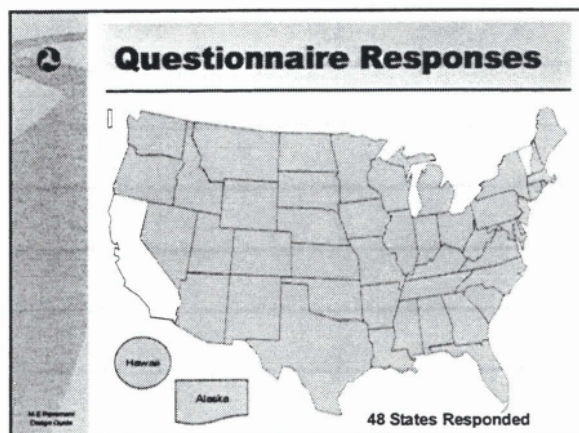

NCHRP Performance Design Guide

Required Data Bases

- Materials database
- Traffic database
- Performance database
- Rehabilitation database

NCHRP Performance Design Guide

What's Being Used in 2003

Pavement Design Procedures	DOTs
1972 AASHTO Guide	3
1986 AASHTO Guide	2
1993 AASHTO Guide	26
Agency's own design guide or combination of AASHTO and Agency procedures	17

M & P Pavement Design Guide

Flexible Pavement Distresses Needing Calibration

- **Rutting** - Unbound base/subbase/
subgrade layers, HMA layers and total
rut depth
- **Fatigue Cracking** - Surface down,
longitudinal and bottom-up alligator
cracking
- **Transverse (Thermal) Cracking**
- **IRI** - Accuracy depends upon predictive
accuracy of all other distresses

Rigid Pavement Distresses Needing Calibration

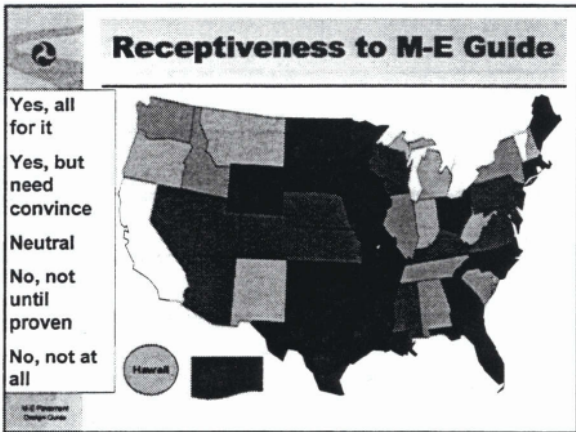

- **Faulting in JPCP**
- **Transverse Cracking in JPCP** -
Top-down and bottom-up cracking
- **Edge Punchout in CRCP**
- **IRI** - Accuracy depends upon predictive
accuracy of all other distress

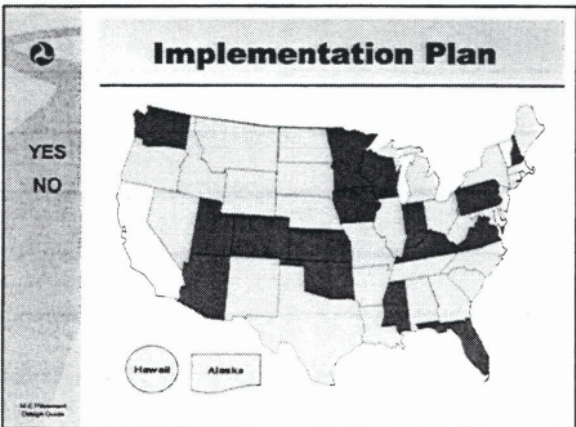

Step 5 - Validation

- **Questions needing answers**
 - Do the calibration factors
produce consistent results
throughout the State?
 - How many sites needed?
 - How often to re-calibrate?

Current Knowledge of the M-E Guide	
Knowledge level	DOTs
Heard the term, but know little	8
Attended an introduction workshop or presentation	21
Participated in the JTF panel for the NCHRP project	14
Attended workshop and/or presentation and participated in JTF panel	5
